WEATHER OF CONCERN

Weather of Concern

- A cold front will bring some showers mainly north of Fresno county starting late Monday night and continue through Tuesday. A stronger storm system will impact the region Thursday and continue through Saturday with substantially more precipitation, especially over the higher terrain. The storm could bring up to 1 foot of snow over the highest elevations of the Sierra by Friday evening with potentially hazardous winter driving conditions and travel delays.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

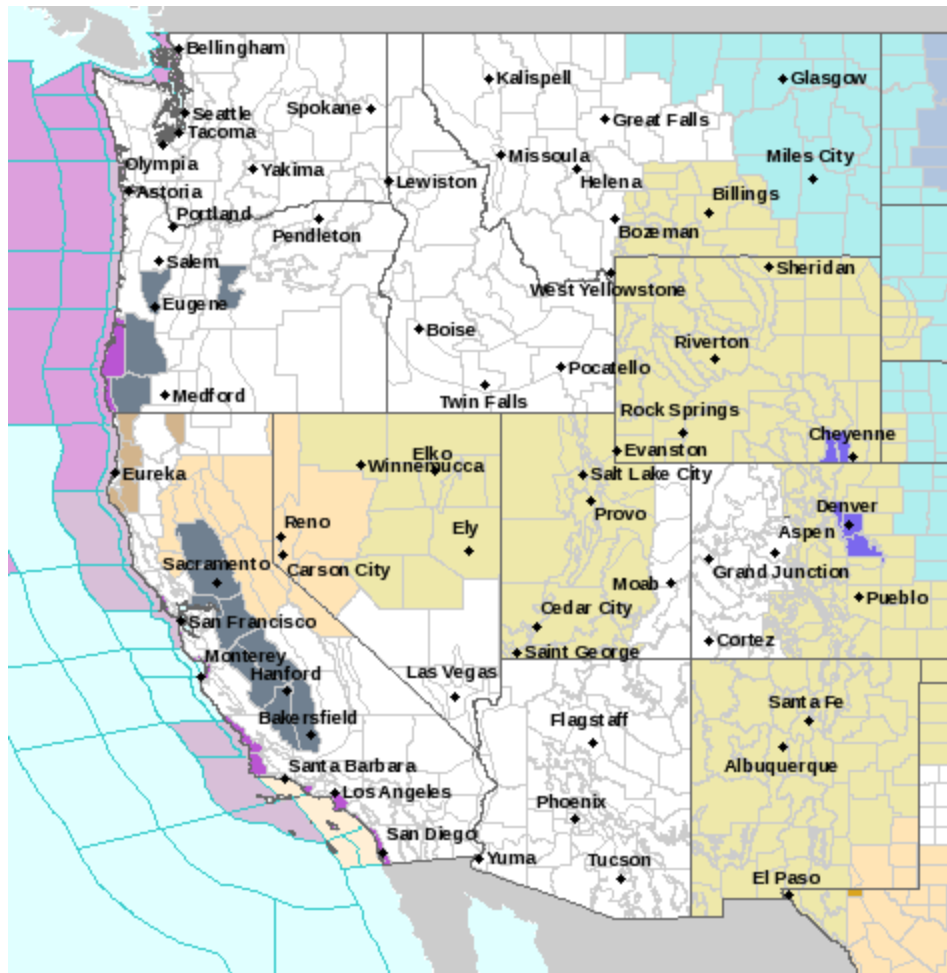

Dry with patchy dense valley fog this morning. Periods of relatively light precipitation late today and Tuesday with fairly high snow levels. Dry Wednesday then more significant precipitation Wednesday night through the end of the week. Lower snow levels with mountain pass impacts Thursday and Friday.

SOUTHERN CALIFORNIA

A weak cold front will bring the potential for light rain across Southwest California Thursday night into Friday night, with most areas expected to receive less than a third of an inch. Rainfall estimates for Montecito are expected to range between one and two tenths of an inch with this first storm. Behind the front, colder air will spread across the area bringing the threat of snow showers across the mountains and higher foothills Friday afternoon into Friday night. During this time, there is the potential for snow showers and gusty northwest winds across Interstate 5 near the Grapevine. A second storm system has the potential to bring additional rainfall to the area early next week, potentially bringing higher rainfall totals than the first storm. However, there is low confidence with this second storm in regards to timing and amounts. High surf will also impact west and northwest facing beaches this Monday through Wednesday night. Breakers could reach as high as 20 feet across favored areas of the Central Coast, and up to 10-12 feet for west facing beaches of Los Angeles and Ventura counties. Other potential marine impacts include deadly rip currents, dangerous sneaker waves, and coastal erosion.

Cal OES LAW ENFORCEMENT MISSIONS

Cal OES Law Missions

- **2018-LAW-44799 01/14/18, 1549 hrs.,** The IERCC reported an inReach SOS activation from coordinates 38° 05' 41" N, 119° 22' 53" W, plotting to the border between Mono County and Yosemite Natl Park. IERCC sent a message to the device with no response. LDO contacted IERCC who stated the signal has moved approximately .26 miles since initial activation. Updated coordinates: 38 05' 60"N, 119 22' 43"W, places it in Mono County near Matterhorn Peak. Mono SO briefed. The emergency contact relayed the device is with a group of 6 hikers and 2 guides, and they planned to hike to the border of Yosemite NP then back to camp. He stated the movement of the device is in the direction of their camp and consistent with their itinerary. He also sent me a screen shot of the campsite which was shared with Mono SO. Based on the available information, we jointly decided this has the appearance of an accidental activation; we will hold off on a SAR response and monitor the device movement against the location of their camp. **Approx. 1723 hrs.,** the updated coordinates from IERCC places the group at their campsite. We monitored several activations after that to ensure the group did not move and, **Approx. 2000 hrs.,** a joint decision was made between LEB, IERCC and Mono County to close the mission. **MISSION CLOSED.**

Cal OES MISSION TASKING

Cal OES Missions
